G. S. HOLMES TALKS OF MEXICAN MINES

Salt Laker and His Son Shipping From Mine Near Nacozari.

PROPERTY IS LEAD-SILVER-GOLD SHIPPER

Describes Town of Nacozari and Its Modern Copper Milling

"We live in a country where mines exist, where they are developed, where they pay. We know what they are. We know what mill and smelter and cyanide plants are, what they do, what they concentrate, what they precipitate, what is saved upon the Wilfley tables and what goes out in the tailings in the waste. There are dumps here, there are dumps there. They are filled with yelwith white, with red metal. We know what smelter smoke is, how much arsenic and sulphur and other poisons are thrown out from the great stacks of the smelting plants without which Salt Lake would be a country village. 's said G. S. Holmes to The Trib-

village, 'said G. S. Holmes to The Tribune on Monday.

'We have mills, perfect ones, too;
we have smelters, likewise perfect; likewise largest in the world. We have
cyanide plants as good, in fact better,
than the best; we have everything, in
fact, better than anywhere else as a
rule. But we don't have palms and
flowers and rare exotics upon the tertraces above our mills. Of course we are
going to have all these things later
on, just to show these farmers who have
been ploughing in smelter smoke instead
of in the ground that the fumes from of in the ground that the fumes from the plants that make a country great do not damage vegetation, because science has overcome this, and we need

science has overcome this, and we need only the practical application.

"I'm just home from a trip to Nacozari, in the state of Sonora, Mexico a town which is owned by one firm, viz.: Phelps, Dodge & Co. They erected the buildings, all of them, and the laborers, as well as the officials, have comfortable homes.

"Now in this town is a stamp mill."

"Now, in this town is a stamp mill, and it is different from any mill of this kind that you ever saw, for its interior is painted white. The ore is crushed 360 feet away from the main mill in a separate plant, thereby preventing any dust from getting into the main mill. dust from getting into the main mill, and it is as clean as a dairy. This mill treats 2000 tons of ore every day. The ore is elevated to the mill by electricity. Every ton is sampled automatically and the sample carried to the assay office. Not a pound of ore is touched by hand from the time it is placed in the ore him at the mine is placed in the ore bins at the mine, six praced in the ore bins at the mine, six miles up the mountainside. loaded upon special trains, until it is in the shape of concentrates and into cars. The property is a copper one, and 95 per cent of the ore is saved. The mill is said to be the most modern mill in the world.

"The town, as I have stated, is owned by the firm. The Mexican government gives the town a commissionaire, who is also the judge, and this official is the governing power of the town. The com-pany erects all the houses, which are constructed of concrete and fire proof. There are two classes of houses, one for the employees, the other for officials of the company. Besides, the company has the company. Besides, the company has creeted a handsome and commodious hotel for the public. The company also built a handsome library building and a commodious bathhouse. It likewise has creeted a church and school building, and ampleys the teachers for the schools. and employs the teachers for the schools.

and employs the teachers for the schools. The town contains a population of 1500. The company has a general store, which last year netted a profit of \$400,000 This, you understand, is in the old Yaqui Indian country.

'Near this place, this model town of Nacozari, my son and I have a silver property, a real mine, from which we are now shipping one carload of ore a week, the car containing forty tons. This ore averages 150 ounces silver, carries 10 per cent copper and 15 per This ore averages 150 ounces silver, carries 10 per cent copper and 15 per cent lead, and we have never taken a general sample from the property, which has three openings, while the vein outcrops on the surface, that ran less than 89 ounces silver. This shows conclusively that we have a real mine. My son has been there seven months and he has secured a number of claims for us. A number were worked ages ago by an ancient race of people. The country is a primitive one, the mineral resources are wonderful, and there is also a great agricultural field in the valley. Yes, Gus likes it, and is doing more than well.

also a great agricultural field in the valley. Yes, Gus likes it, and is doing more than well.

"From the town of Nacozari the Southern Pacific has a grade completed for a railroad to Guadalajara, where it connects with a railroad to Mautazillo, on the Pacific coast, where there is a fine harbor, the only harbor north of Mazatlan, which is 300 miles to the south. It is a long trip from Salt Lake to Nacozari, but when one gets into old Mexico he finds not only a quaint, but a wonderful country. The chief engineer told me that the rails would be laid and the trains running within ten months and will open the most resourceful country in Mexico."

Mr. Holmes added that all the money which he takes out of Mexico, and which he hopes will be a goodly sum, will come to Salt Lake and be spent in the home of his adoption.

COLUMBUS MINE IS SHOWING UP WONDERS

"We do not know yet whether this opening extends across the width of the ove body or along its strike, but this teint will be determined as soon as possible." said General Manager Tony Jacobson, on Tuesday, while explaining the latest developments at the mine in Alta of the Columbus Consolidated company, it will be recalled that several days ago the raise from the fourth level in the main ore shoot encountered a streak of heavy sand sulphides, and several hundred mine cars of this ore were filled before the voluntary flow of the same ceased.

Superintendent A. O. Jacobson on Monday managed to reach the space left by this flowing one, and it is forty feet in extent, recembling a cave, and there is one on the bottom, at the top and at the sides. This is not the first instance of sand sulphides in the Columbus Consolidated property but Mr. Jacobson states never before was there the amount that there is in this particular case. The ore body is the best the mine has ever had displayed, the values being mainly copper and silver, with small gold contents.

FEWER SMELTERS AND MORE ORE, THE CRY

Little Inducement for Capital to Add More Smelters to

Hardly a day passes without leaving behind traces of new smelting projects, and hardly a paper is received from the majority of mining camps throughout the country without an expressed hope that a smelter will be installed within this or that camp here or there, many stating that strong capital is contemplating backing independent enterprises for the benefit of certain sections. All this is interesting reading for the established smelting enterprises of the west, the various officials of which are giving the mining camps searching exgiving the mining eamps searching ex-aminations with a microscope in the effort to keep the furnaces supplied with

food. The local smelters need ore, that is admitted, and there seems to be little gard as long as the prices of silver, lead and copper hover round their present levels. A prominent smelter expert stated Tuesday that with what plants there were now in operation in the Salt Lake valley, with the International plant coming up, as wide a market for ores of Utah and Nevada is presented as could be desired, especially when it still is within the memory of many camps when the nearest smelter was in

He stated that if smelters sprang up as thickly as reports say they are going to do, there will be smelting plants scattered along the railroads of the west scattered along the railroads of the west like cattle-loading stations now. He also points out numerous camps of the west in which still are standing skeletons of old smelting plants which seem to point the way out for capital rather than invite it in. The smelters say there is not so much need for new smelters as there is ore for those now in operation.

in operation.

Local smelting men are not inclined Local smelting men are not inclined to the belief that there will be the extensive smelter installation apparently looked for in the near future. Capital will find itself with too many smelters on its hands, very much like the steambost Lincoln told about. It had a five foot boiler and a seven-foot whistle, which left very little steam for making progress.

STOCK LEVELS DO NOT

Sixth Level Brilliant Shaft to Be Explored for Copper Wealth.

BIG SHOWING IS QUESTION OF EFFORT

Sam Levy Returns From Greatest Camp in the Sagebrush State.

Sam Levy, one of the mining engineers of the National Development company's staff, has returned from a visit to the Ely Copper country in the interests of the Ely Consolidated company. The Ely Consolidated company was one of the organizations born during the initial excitement era of that section, and the company, prior to the 1907 financial panie, drove two shafts to good depth. One of these shafts, the

to good depth. One of these shafts, the Brilliant, is down to the 625 foot level, while the other is below the 500 foot level, but in neither shaft did the management stop to explore any of the good showings deeming depth the thing first of all to be gained.

Mr. Levy states that the Brilliant shaft has been placed in shape to allow the company to commence an energetic campaign of development work on the 625 level. It is the intention to drift along a richly mineralized bed towards the west in order to encounter the intersection of this bed with a gigantic fissure. This fissure shows for quite a distance along the surface, and gantic fissure. This fissure shows for quite a distance along the surface, and it is logical to assume that where it crosses the bed will be found a typical Ely resource. The drift will proceed in a heavily mineralized zone, the formation being a beavy iron sulphide. The two shafts are equipped with complete and modern hoisting machinery and those interested in the company look forward with confidence to the results of this resumption of activity. Ely, states Mr. Levy, impresses him as being the greatest camp in Nevada. The business men complain that too lit-

as being the greatest camp in Nevada. The business men complain that too little of the large monthly pay roll gets into local circulation, but with a general loosening up of industrial conditions wage-carners will be more inclined to spend their money, while companies now idle will add to the general welfare with more miners employed. While in the district Mr. Levy was conducted over the steam shovel territory of the Nevada Consolidated company, where huge tonnages are being tory of the Nevada Consolidated company, where huge tonnages are being whisked into cars for the concentrating plant at Steptoe. This is most interesting work, and it is allowing the Nevada Consolidated and Cumberland Ely companies to make a splendid record in copper production. The camp is greatly interested also in the work as planned by the new owners of the Giroux Consolidated properties. This work contemplates a new five-compartment shaft to great depth, to be known as the Giroux shaft, and churn drill operations as well as smelter installation.

operations as well as smelter installation.

"If Ely gets all the railroads one can hear of over there, it soon is destined to be the greatest railroad center of the world," Mr. Levy said yesterday, with a smile. "But every one believes, and with very good reason, apparently, that the road to connect the camp with Goldfield will be put through at the earliest possible hour. The proposed route is being gone over now thoroughly, and the final plans will be determined without delay. This road will mean much to Ely and Goldfield, and it will mean more to innumerable mining camps en route."

Stock Letter.

James A. Pollock & Co., bankers and brokers, furnish the following received over their private wire yesterday after-

over their private wire yesterday afternoon:

Hutton & Co. Stock Letter—New York
—Bull operations by bankers' syndicate
continued to be a feature in today's security market, but the leading priced issues were allowed to take care of themselves, and probably some good selling occurred in the stocks to check speculation.
However, many of the low priced shares
came in for activity and were advanced
on influential buying for further possibilities in the stocks of merit. Sentiment has
become very cheerful in Wall street over
the outlook, new tariff bill and resumption of industrial activity. The market
will work higher by degrees.

Dick Bros. Stock Letter—New York—
Continued heavy profit-taking made the
market irregular and somewhat reactionary today, but falled to bring about any
real weakness. Stocks were well taken
on the declines. On the dip tomorrow we
think stocks can be bought again.

Ore Shipments.

The Pioneer sampler on Tuesday re-leased 3 cars of ore from Utah and 1 from Nevada camps.
The Taylor & Brunton company released 5 cars from Utah and 2 from Nevada camps.

PIONEER SAMPLER IS SOLD ON TUESDAY

Ernest R. Woolley and Others Secure Control of Valuable Custom Sampler.

An important deal was consummated in this city Tuesday afternoon, when the ownership of the Pioneer Ore Sampling company's control passed into new hands. Ernest R. Woolley and associates were the purchasers, there being 60 per cent of the stock transferred to their names immediately after a comfortable cash sum exchanged hands. Mr. Woolley stated after the deal was consummated that he and associates considered this one of the best investments in the state. That the success of the Pioneer company may be directed by those most familiar with the enterprise, no change will be made in the mausgement, Frank Higginbotham remaining as general manager and L. A.

Copeland as mill manager.

The plant of the company is located at Sandy. Utah, on a direct line with all the mining camps of the west, and all the mining camps of the west, and within easy reaching distance of the smelters of the valley. The plant was, as its name implies, the first to be started in the valley, and the company has a well established trade among the producers of the west. The plant is especially well located for the camps of Park City, Alta, American Fork and Big Cottonwood, from which a generous tonnage of ore is certain to be brought during the coming years.

UTAH CON. CONDITIONS IN SPLENDID SHAPE

Utah Consolidated is understood to have opened up a very large tonnage of high grade ore in the past six months, and the mine is said to look better now than at any previous time in its history. A gentleman who recently visited Salt Lake was told by the management that Utah Consolidated workings are now 400 feet below the tunnel; that this development has proved conclusively that the crebodles are not cut off by a fault, as was at one time asserted by enemies of the management, but that some of the richest ore ever taken out of the mine is being opened in the new workings. The body of lead-silver ore in the western option of the property has been developed and preparations made to take out a very large tonnage of it after a satisfactory smelting arrangement has been effected. The company last week declared its usual quarterly dividend of 50 cents per share. It is now paying at the rate of 5 per cent on the market price of its stock.

per share. It is now paying at the rate of 6 per cent on the market price of its stock.

The management has obtained concessions from various companies owning property between its mine and the site of the new smelter, and will begin the erection of an aerial tramway within a few months. The International Smelting company is already at work on the foundation for the new plant, and there is every indication that it will be completed within twelve months. Whether or not it will contain facilities for the treatment of lead ore has not yet been made public, but in view of the growing probability that Utah Consolidated will develop into one of the biggest lead mines in the Bingham district, it is expected that the new smelting company will enter the lead reduction business also.

In the past I have frequently expressed the opinion that eventually Utah Consolidated stock would sell at \$100 per share. Nothing but the extensive development of the property could bring about such a result, and I believe that this is now the plan. The extension of openings during the past year has brought to light some of the tremendous possibilities of the property, and has supplied all the encouragement needed to stimulate a continued search for one, both laterally and at greater depth. I consider Utah Consolidated one of the cheapest stocks, and one of the best investments amons the coppers.—Walker Copper Letter.

Mining Notes.

John Dern returned Tuesday morning from a visit to Nebraska. G. L. Bemis, general manager of the Union Chief company, is back from the

Charles Taylor, general manager of the Chafey Consolidated Leasing company, is at the property in Humboldt county, Ne-vada.

Samuel Newhouse, with the Boston Consolidated and Newhouse companies, is removing his offices from the Dooly block to the new Newhouse skyscrapers. The old quarters on the sixth floor of the Dooly block will be occupied by the International Smelting and Refining company and the Utah Consolidated company.

pany.

C. L. Dignowity, at present of Reno, who was one of the best-known pioneers of the Bingham district, is in the city enroute to New York. Mr. Dignowity states that Nevada is improving steadily, and he believes that the new Pioneet camp near Builting will be one of the big districts of the Sagebrush state.

Don't Wear a Truss

After Thirty Years Experience I Have Made a New Discovery For Men, Women or Children That Cures Rupture.

Costs You Nothing To Try It.

If you have tried most everything else, come to me. Where others fail is where I have my greatest success. Send attached coupon today and I will send you free my book on Rupture and its cure, showing my new discovery and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember I use no salves, no harness, no lies.

salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge and once having seen my book and read it you will be as enthusiastic as my hundreds of patients whose letters you can also read. Fill out free coupon below and mail today. It's well worth your time whether you try my discovery or not.

FREE INFORMATION COUPON C. E. Brooks, 9570 Brooks Bldg., Mar-shall, Mich.

Please send me by mail in plain wrapper full information of your new discovery for the cure of rupture.
